

SKYBOX

AI By Blockadelabs

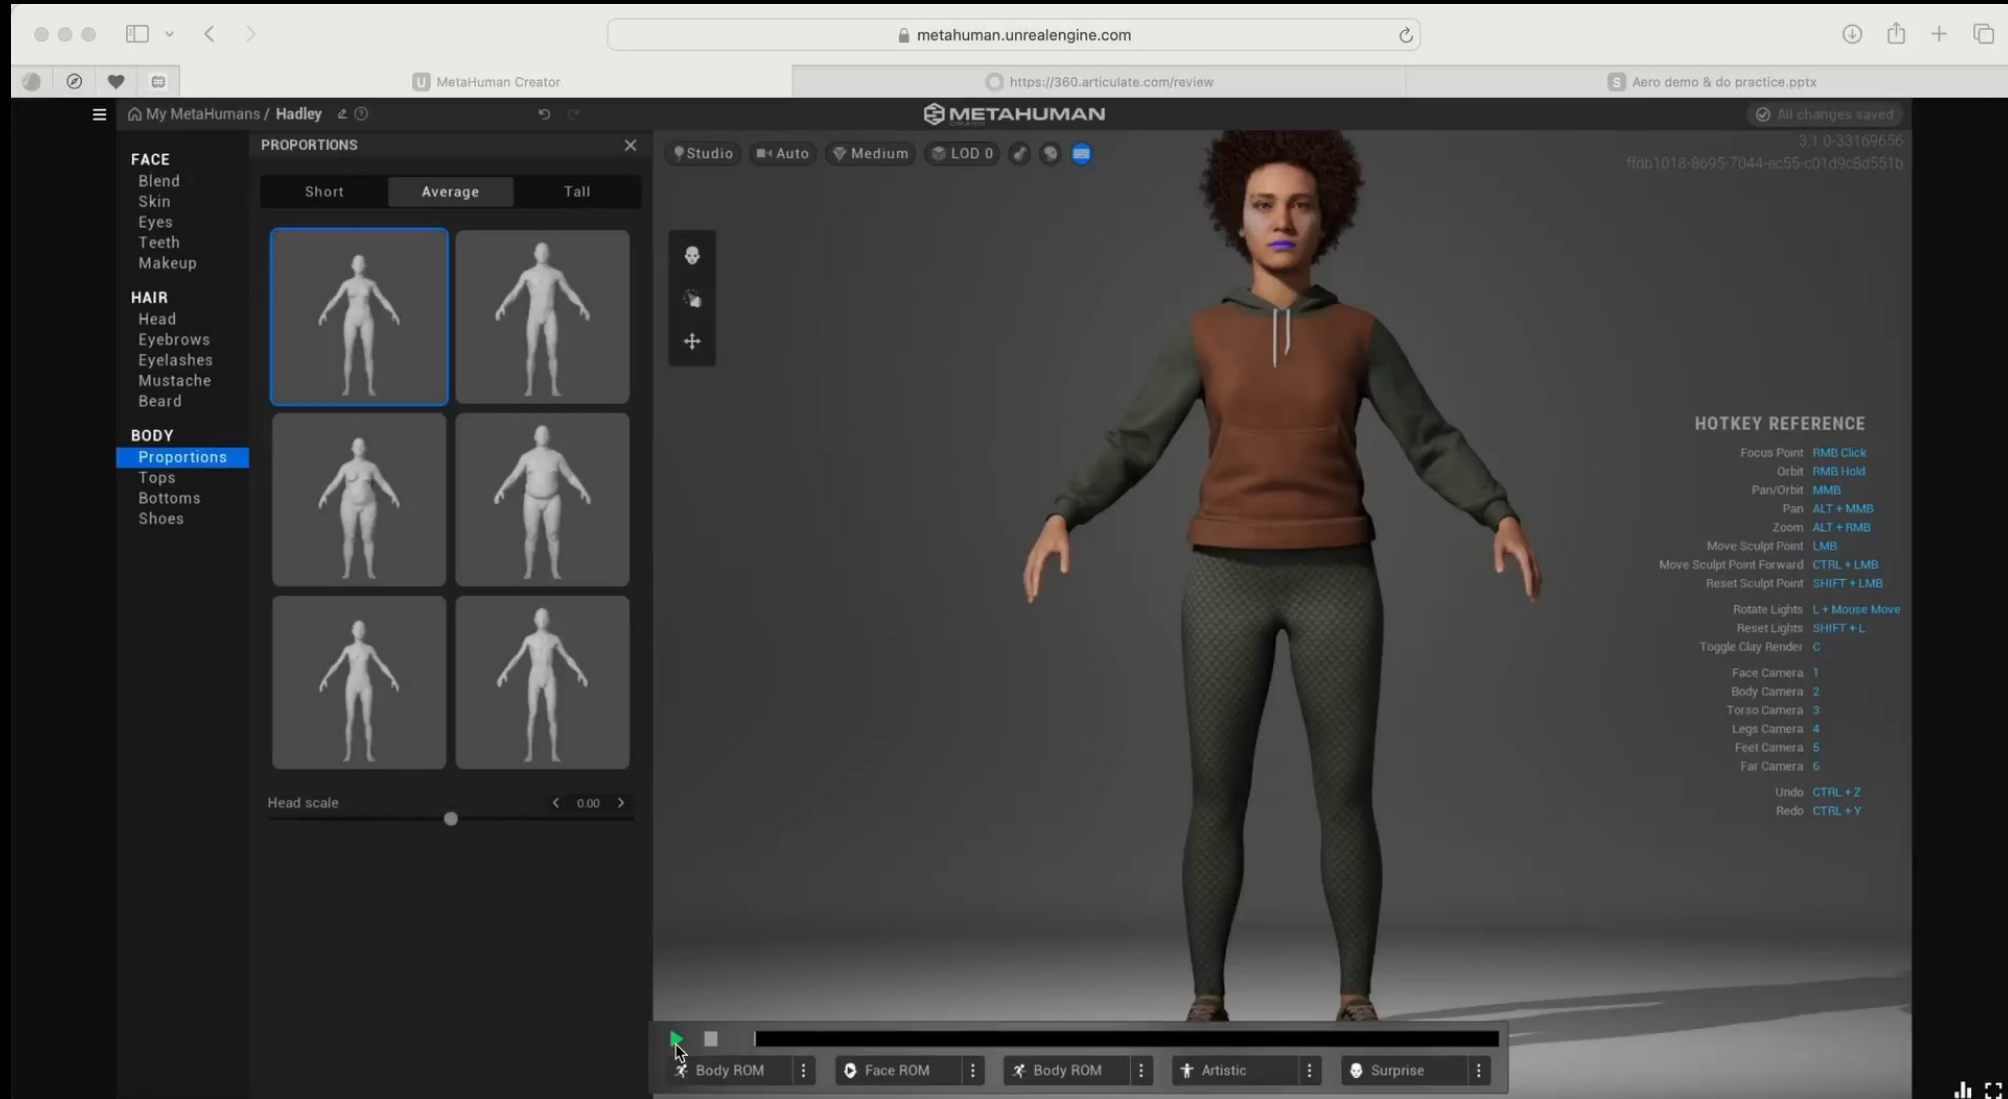

Skybox AI is quick and easy to download and access on my personal laptop. I chose the free version, picked an image, and the AI generated an amazing scene in no time!

Here is a screen recording of the AI image I created, which took only a few minutes to create this 360 Here's a screen recording of the AI-generated image I created in just a few minutes, resulting in this stunning 360 video. I'm blown away by how quickly this AI software produced a high-quality scene featuring futuristic flying animals, vibrant trees, and funky characters!

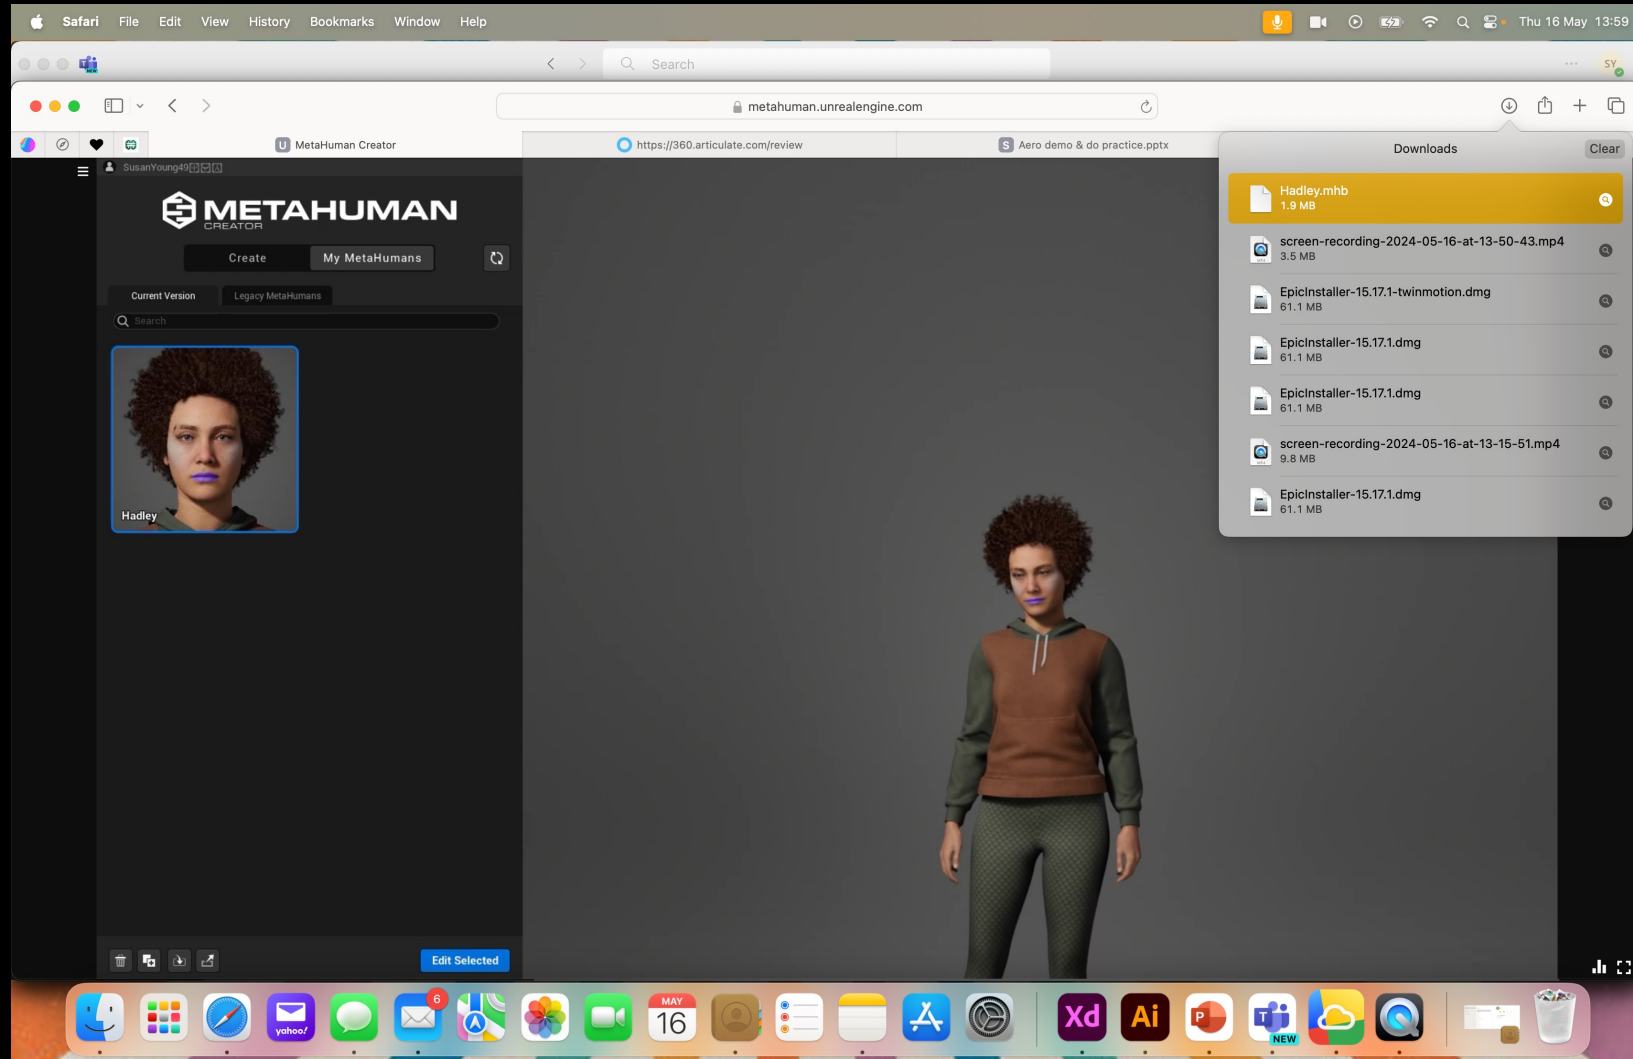

I created a metahuman, customised the hair, and added funky makeup for standout features, then did this screen recording. The software is impressive—easy to use and quick to set up a metahuman.

I'm excited to explore more and see what this clever piece of tech can do!

I exported **but** the "MetaHarper Book File, mhb file isn't recongised on my Apple Mac.

A workaround would be to research suitbale software for mhb file if I was going to continue this development further.

Initially, I had no particular interest in meta-humans or related concepts. However, my curiosity was stimulated when I started exploring Skybox. The impressive results and professional outcomes of these experiments significantly boosted my confidence. Now, I feel prepared to tackle any work-related challenges that come my way. This experience has shown me that having the right tools not only makes tasks easier but also fuels creativity and a willingness to experiment further.
